HDU 15/12 Compact Offline Oil Filter

CJC™ Offline Fine Filter, Compact Design

CJC™ Product Sheet

APPLICATION

The CJC™ HDU 15/12 Compact Offline Oil Filter is used for maintaining clean oil in (power) transmission, hydraulic and lubrication circuits. The HDU 15/12 is ideal for removal of particles, oil degradation products and water in applications such as:

- Mobile Hydraulic Equipment
- Packaging Machines
- Compact Hydraulic Systems

FUNCTION

The filter pump draws fluid from the system tank (at lowest point) and pumps it through the filter insert. From the centre of the insert the fluid flows through the filter house and returns to the tank.

The pressure drop across the filter insert - and consequently the contaminant absorption of the filter insert - is monitored on the pressure gauge on the filter base.

The filter outlet port is placed on the front of the filter. The filtered fluid should be returned to the tank close to the suction pipe of the main system pump.

Note that the return point should be non-pressurized.
Contact us in case this is not possible.

THE FILTER PUMP

The filter pump is a gear pump. The electric motor can be supplied as AC or DC motors. IP Class: IP 55

FILTER INSERT

The CJC™ Filter Inserts consist of several discs bonded together. Depending on the fluid to be filtered, the material is either cellulose or cotton linters.

MAIN DIMENSION

249 x 249 x 294 mm

MAIN MATERIAL

Aluminium

FILTRATION ABILITY	
• Particle Removal	All CJC™ Filter Inserts have the following filtration degree: - 3 µm absolute: 98.7% of all solid particles > 3 µm - 0.8 µm nominal: 50% of all solid particles > 0.8 µm are retained in each pass.
	The dirt holding capacity is 0.75 litres of evenly distributed solids.
• Degradation Products	Oxidation products, resin / sludge, and varnish are retained by the cellulose material, which will retain appr. 0.5 kg of oil degradation products.
• Water Removal	The water absorption potential is up to 50% (i.e. 375 mL H ₂ O) of the total contaminant holding capacity.
